

Holiday Deaths (Utah 2001-2010)

- Holiday deaths are a concern because of the increased death rate due to possible risk factors such as fatigue, impaired driving, long distance traveling, speeding, and traveling on unfamiliar roadways.
- Over the past 10 years, the 4th of July Holiday (1.4) and the Pioneer Day Holiday (1.3) had the highest rates of deaths while the New Years Holiday (0.5) had the lowest rate.
- In 2010, the 4th of July had the highest death rate per day (1.3) while Halloween and Christmas had the lowest rates (0.0).
- The holiday death rate per day was 0.7 which was the same as the rate per day for all 2010 days.

Note: Because of the differing lengths of holidays, the rate per day is provided and should be used for comparisons.
